Χαρακτηριστικά

Model-View-Controller (MVC) design pattern

Yii adopts the proven MVC architecture, which allows for clean separation of concerns (SoC).

Database Access Objects (DAO), Query Builder, Active Record, DB Migration

Yii allows developers to model database data in terms of objects and avoid the tedium and complexity of writing repetitive SQL statements.

Form input and validation

Yii makes collecting form input extremely easy and safe. It comes with a set of validators as well as numerous helper methods and widgets to simplify the task for form input and validation.

AJAX-enabled widgets

Integrated with jQuery, Yii comes with a set of AJAX-enabled widgets, such as auto-complete input field, treeview, data grid, which enables writing highly efficient and versatile user interface extremely simple.

Authentication and authorization

Yii has built-in authentication support. It also supports authorization via hierarchical role-based access control (RBAC).

Skinning and theming

Yii implements a skinning and theming mechanism that allows you to quickly switch the outlook of a Yii-power website.

Web services

Yii supports automatic generation of complex WSDL service specifications and management of Web service request handling.

Internationalization (I18N) and localization (L10N)

Yii supports message translation, date and time formatting, number formatting, and interface localization.

Layered caching scheme

Yii supports data caching, page caching, fragment caching and dynamic content. The storage medium of caching can be changed easily without touching the application code.

Χαρακτηριστικά

Error handling and logging

Errors are handled and presented more nicely, and log messages can be categorized, filtered and routed to different destinations.

Security

Unit and functionality testing

Yii provides support for writing and running unit tests as well as functionality tests, based on PHPUnit and Selenium.

Automatic code generation

Yii provides a set of intuitive and highly extensible code generation tools that can help you quickly generate the code you need for features such as form input, CRUD.

Friendly with third-party code

Yii is carefully designed to work well with third-party code. For example, you can use code from PEAR or Zend Framework in your Yii application.
